

Micro Video Switch Board Help Guide

Purpose

This procedure explains how to operate, configure, and troubleshoot the **Micro Video Switch Board** used with the streaming computer.

System Overview

The **Micro Video Switch Board** is powered and controlled via a USB connection from the board to the streaming computer.

For the board to function properly:

- The **streaming computer must be powered on**
- The **ATEM control software must be running**

Startup Procedure

1. Ensure the **Streaming Computer is powered on.**
2. Verify that the **USB cable is connected** from the Micro Video Switch Board to the streaming computer.
3. Launch the **ATEM Software Control application** on the streaming computer.
4. Confirm the board is responding to button presses.

Reconfiguring Button Assignments

If you need to change the function of buttons on the Micro Video Switch Board:

1. Open the **ATEM Setup** application on the streaming computer.
2. Select the **Micro Video Switch Board** device.
 - Make sure you are **not selecting the console setup.**

3. Once the correct device is selected, click the **information icon** located under the device name.
4. From this menu, you can **customize the button assignments** for the board.

Troubleshooting

If the Micro Video Switch Board is not functioning, follow these steps:

1. Check Computer Power

- Confirm the streaming computer is turned on.

2. Verify ATEM Software

- Ensure the **ATEM Software Control** program is open and running.

3. Check for Software Updates

- Confirm that both applications are up to date:
 - ATEM Software Control
 - ATEM Setup
- Updates can be downloaded from the [Blackmagic Design support page](#).

4. Confirm Device Detection

- Open the **ATEM Setup** application.
- Verify that the Micro Video Switch Board appears in the device list.

5. Check Physical Connections

- If the board does not appear in ATEM Setup:
 - Inspect the **USB cable connection**
 - Ensure the cable is securely plugged into both the board and the streaming computer.
